

SAMSON 2022

WINTER INSPECTION

"Regular maintenance of your SAMSON machine contributes significantly to its performance and value retention! Maintenance instructions and warranty conditions can be found in the maintenance manual of the respective machine"

Winter inspection - for the sake of your SAMSON machine

Look after your SAMSON machine as you would your tractor or combine harvester! An authorised main inspection of your application equipment at least once a year is the best protection against machine breakdowns and necessary to permanently maintain the personal, traffic and operational safety of your machines. It usually makes sense to carry out maintenance in winter, when there is time to do so before the season starts. The winter inspection not only minimises the risk of failure during application, but also prepares the machine for optimum performance. This increases work efficiency and uptime and saves costs for unforeseen repairs. At the same time, ongoing maintenance helps the machine retain its high resale value.

Expert inspection increases application efficiency

Inspection of your spreaders, slurry tankers and booms, incorporators and accessories by SAMSON specialists increases the precision and efficiency of your application work. Expert maintenance of hoses, distributors, discs, flow systems and the like ensures that nutrients are applied as economically and precisely as possible year after year. This facilitates compliance with environmental regulations and ensures maximum benefit from the application.

We know your SAMSON in detail

Maintenance is carried out professionally by SAMSON dealers. Close cooperation between SAMSON AGRO and each local SAMSON dealer ensures that you receive the correct factory recommended maintenance. This ensures that the machine is checked according to the model-specific instructions, potential problem areas are determined and remedied in consultation with the customer. You can also be sure that your SAMSON dealer only uses original SAMSON spare parts for maintenance. Maintenance instructions and warranty conditions can be found in the maintenance manual of the respective machine.

Machine parts delivered on time

Our stable supply chains and extensive in-house production give us the greatest possible control over delivery capability and quality. Our large, central spare parts warehouse and well-stocked on-site warehouses ensure fast and economical maintenance and upgrading of all SAMSON products. Original spare and wear parts from SAMSON AGRO are competitively priced. You can obtain them quickly and easily from your SAMSON dealer.

Original spare and wear parts for added safety and extended service life

SAMSON AGRO custom manufactures most of the components so that they are perfectly adapted to the machine and meet our high quality standards. Original spare and wear parts from SAMSON AGRO extend the service life of your SAMSON machine. At the same time, they help to keep your machine fully functional and retain the manufacturer's warranty.

Upgrade your machine

SAMSON AGRO attaches great importance to future-proofing all SAMSON machines. Upgrading your machine with the latest technologies and functions should therefore be as easy as possible. We have a selection of accessories that can be retrofitted for most SAMSON machines. Would you like to learn more about newly available functions or retrofit packages for your SAMSON machine? Ask your SAMSON dealer for advice during your winter inspection.
